## **Expert RA published "Creating and developing innovation centers: guide technologies and key principles".**

20.04.2012

Expert RA together with Skolkovo Foundation published **"Creating and developing innovation centers: guide technologies and key principles"**.

The works contains a list of top-30 world investment managers, the most successful in innovation environment achievements. They built the environment to grow innovation business for over 2,5 trln dollars annually, their wards being Intel, Nokia Group, DuPont, their innovations: Bluetooth, cloud programing, EPROM memory chip. The list participants are co-authors of the study based on their profound interviews.

The Guidline presents rating of the 35 most efficient world innovation centers, whose experience is generalized in the Guidline. Among such centers are world renowned Silicon Valley, Finnish technology town Oulu, Singapore science park One North etc.

For the first time in Russia and partly in the world the study generalized management experience and approaches to innovation infrastructure building, which proved their efficiency in the most successful innovation centers. Each of them is quite unique. But they all have something in common: first, regularities of development, second - capacity for replicating technologies of establishing innovation centers, including Russia. "Guideline" describes the regularities and technologies without turning to abstract theories but giving specific examples of innovation centers in the USA, France, Sweden, Finland, China and other countries.

The "Guideline" would be the main topic for discussion at the Innovation Economy Summit, organized by Expert RA and Skolkovo Foundation. The Summit would be visited by the innovation management leaders belonging to the world top-30.
